NOVEMBER / DECEMBER 2010

ECODYNE IS NEW LICENSEE FOR COMPOSITE COOLING SOLUTIONS NEW FIBERGLASS COOLING TOWER STRUCTURES

Paul Holmes, Vice President and General Manager of Ecodyne Limited is pleased to announce that effective Oct 12, 2010 Ecodyne Limited is the Canadian Licensee for Composite Cooling Solutions' new fiberglass cooling tower structures for the Power and Process markets.

Composite Cooling Solutions of Ft Worth, Texas has been an innovator in the development of field erected fiberglass cooling tower structures and delivers a product that requires approximately 50% of the field man-hours to construct, with the inherent safety benefits of the construction sequence, when compared to a traditional stick framed wood cooling tower structure.

Simplification is demonstrated in design with the use of 1 standard bolt size for all structural connections. Traditional wood towers utilized over 50 various bolt diameters and lengths.

This agreement has been over 12 months in the making and was recently concluded with a visit and presentation with our Cooling Tower team by Mr. Jim Baker, Vice President of CCS.

We encourage you to visit the Composite Cooling Solutions web site at www.compositcooling.com to view the fiberglass cooling towers that are now available through Ecodyne Limited in Canada as well as the wide range of products available from Composite Cooling Solutions. Our own web site will soon be updated to reflect our licensing agreement with CCS.

We are very pleased to bring this technology to our company and look forward to delivering it to the Canadian Power and Process market.

WINTER OPERATION OF YOUR COOLING TOWER

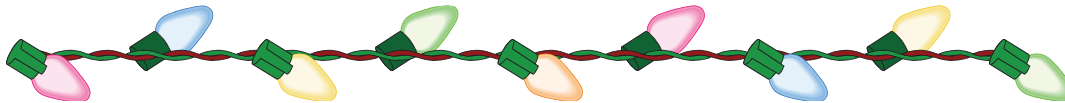

Ice build up in and around your cooling tower during extreme weather is controllable. Preparation of your tower prior to winter months and proper operating techniques must be employed to eliminate costly repairs and down time.

To discuss the merits of pre-winter inspection and service, air inlet enclosures or other modifications and operating techniques contact Ecodyne Cooling at 1-888-ECODYNE or by email to stephen.rogers@ecodyne.com

DO YOU HAVE THE SPARE PARTS NEEDED TO INSURE UNINTERRUPTED SERVICE FROM YOUR COOLING TOWER?

Don't get caught with an untimely breakdown and no spare parts on hand. Although we can offer rush delivery service on most parts, it's far more cost effective to maintain the basic spares in your inventory. Parts for drive shafts, gear reducers, fans and water distribution nozzles are a few of the key items which should be considered.

To discuss your spare parts requirements contact Ecodyne Cooling at 1-888-ECODYNE or by email to mark.kerr@ecodyne.com.

We would like to take this opportunity to wish all of our customers a Happy Holiday Season and a Prosperous 2011.

Please be advised that our offices will be closed from December 24th to December 31st.

If you have an emergency during this time, please call 1-888-ECODYNE (326-3963) and a representative will be happy to assist you.
