Ecodyne Aftermarket

ECODYNE SAYS "NUTS" TO OILY WATER

Ecodyne Water has joined forces with AFIC to promote the HYDROFLOW™ NUT SHELL FILTER, WALNUT SHELL FILTERS, used in the treatment of oil contaminants and suspended solids from a water stream.

The HYDROFLOW™ deep bed nut shell filter brings major improvements to filtration technology, by utilizing "BLACK WALNUT SHELLS" as the media, the HYDROFLOW™ removes greater than 98% of oil contaminants and suspended solids from the process stream.

Some of the HYDROFLOW™ features and benefits:

- A positive media clean up which prevents bed channeling and mud balling, thereby, giving longer filter life and eliminating bed replacement.
- High flow rates in a compact design which reduces space requirements. Does not require clean water for filter cleanup.
- Simple automatic design functions provide for low operator, maintenance and training costs.
- No gas or air scour requirements. Positive media retention.
- **Contact Ecodyne today for more information, and if you're in the market to replace the walnut shell type media already in your present system feel free to give us a call for a competitive quote.**

LET ECODYNE HELP YOU...

- Personal attention to every detail.
- Solid, dependable and friendly customer service.
- knowledgeable sales resource team.
- Cost - effective solutions to your particular applications.

**WHEN IT'S JUST GOT TO GET THERE –
LOOK TO ECODYNE TO GET THE JOB DONE**
